
What went wrong (from the outside-view retro)

Model finished at T+6.0 h; no CV run after it improved M1 (0.786)
Single sealed TEST spent at T+11.6 h of 24 (FREEZE 5.3 h before its gate); no second shard
12 of 34 amendments (A23-A34) landed in the last 8.6 h around the freeze; A34 after TEST
Priming-aware Cantley arm known to win on primed sites, but left out of FREEZE

Opus 5.5 and Sonnet 5.5 were available; the model run by each agent is not recorded. Agents wrote only in their own paths and never ran git.
